

The Complete Bin Collection

Beautiful spaces, practical solutions

+ About us

botton+gardiner has been designing and manufacturing commercial furniture and waste solutions for over 30 years.

Embedded in our core values is our commitment to quality, durability, sustainability and community. We take pride in crafting our collections locally, overseeing every aspect of design, engineering and manufacturing with meticulous attention to detail.

Our mission is to help our clients create public spaces that are cohesive, inclusive and functional - so people can come together to live, learn, work and play.

Committed to accessible and inclusive design

Sustainable solutions for a better tomorrow

100% locally-made

Superior quality from design to delivery

With an in-house team overseeing every aspect, we maintain full control over the design and development process, ensuring our products are dynamic and adaptable. Collaborations between clients, our designers and manufacturing teams guarantee solutions that meet our clients' specific requirements.

Shortened lead times, reduced carbon footprint

High quality is paramount from manufacture through to delivery, all within shorter lead times. By manufacturing locally, we allocate more time for production and reduce delivery times, while also decreasing our reliance on carbon-intensive transportation.

+ Australia's waste generation

While our nation's growing population inevitably leads to increased waste generation, it also fuels a heightened commitment to sustainable waste management.

Australia generates roughly the equivalent weight in waste of

471

Sydney Opera Houses in a year¹

Australia's resource recovery rate has only increased by **2.2%** since 2016 to **60-65%**.

Our national target is

80%

by 2030²

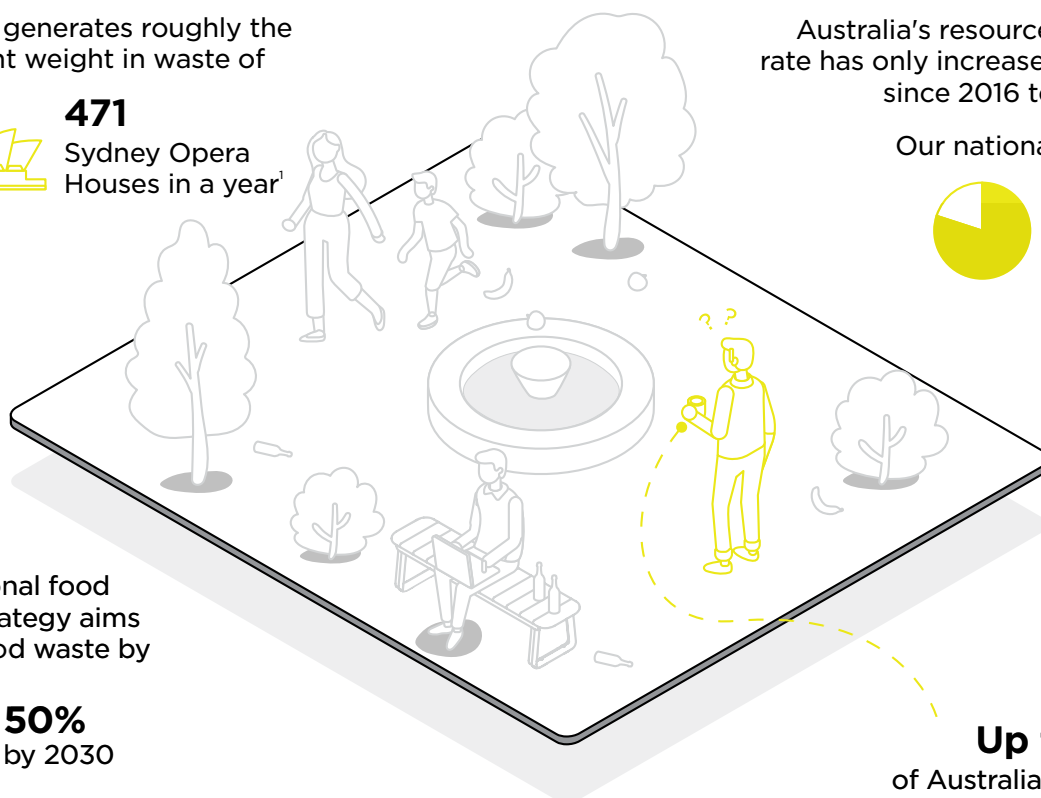

The national food waste strategy aims to cut food waste by

50%

by 2030

to achieve this it means eliminating waste in wholesale and retail.

Up to 50%

of Australians are still confused about recycling³

+Litter Bins

Our commercial litter bin range includes solutions for both indoor and outdoor use. Featuring durable finishes, and a strong focus on functionality and design, our bins help keep high-traffic public areas clean and organised. The range includes single, double and triple waste stream options for efficient waste separation, along with space-saving designs to reduce footprint. Whatever the setting, we have a litter bin solution to suit every public space.

+ Bin design & placement considerations

The way we design and position our bins can significantly impact our recycling efforts. By making the process simple and intuitive, we can encourage more people to recycle correctly and divert waste from landfill.

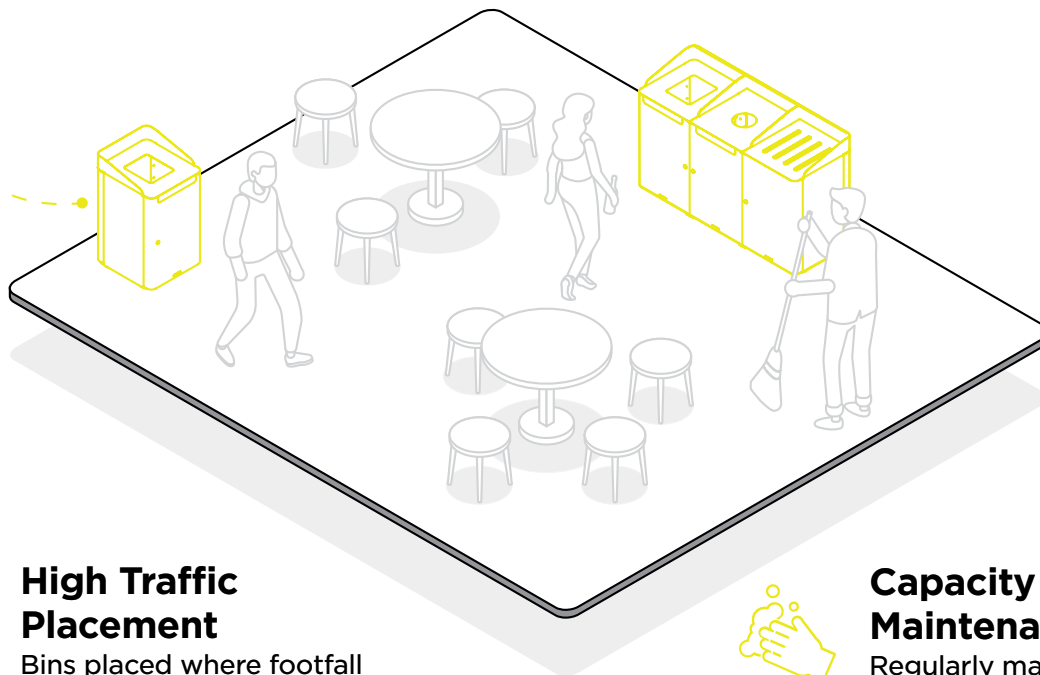

Visibility

Consistent waste stations, colours, and clear labels.

Accessibility

Reachable and usable.

High Traffic Placement

Bins placed where footfall is highest encourage correct disposal.

Capacity and Maintenance

Regularly maintained bins avoid overflow and ensure tidiness.

Project: Canberra Hospital | Product: Noosa Bin Housing Single, side-by-side | Hardwood: Dark Oak | Powder-coat: Coffee

+ Bin Housings

Commonly used on footpaths, streets, and entryways, our bin housings enclose wheelie bins for easy emptying and high-capacity waste management. Ideal for remote areas, they're available in durable finishes and functional designs to suit any landscape.

+Materials & Finishes

+ Waste not, want not

We are committed to the international standards of sustainability – from design to disposal.

certified hardwood

Sustainable forestry management drives our hardwood selection process. Our Australian Eucalyptus hardwood is certified by the Program for the Endorsement of Forest Certification (PEFC), the world's largest forestry certification system.

material alternatives

We offer sustainable alternatives to hardwood, such as Duraslat™; a mineral-based composite material that contains no Volatile Organic Compounds (VOCs) and is made from 90% recycled or reclaimed materials.

recycled materials

We locally source our steel and our aluminium. It means we know it uses recycled content and is 100% recyclable.

low pollutants

Our powder-coating process doesn't emit VOCs and has Environmental Product Declarations (EPDS) that enable projects to qualify for LEED credits.

mindful manufacturing

Our local manufacturing minimises, sorts and responsibly disposes of physical and airborne waste material, while reducing carbon-intensive transportation.

Sustainable Hardwoods

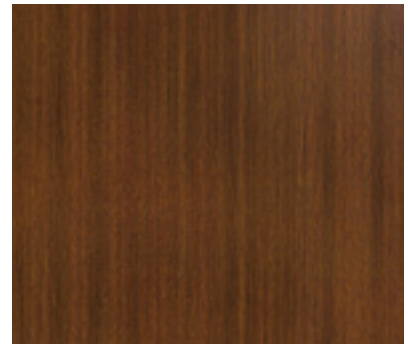

Our hardwoods are sourced from sustainably managed regrowth forests. We select timber species that have a grain structure and density ideally suited to longevity in harsh public environments. In exterior applications, the natural beauty of the timber is further enhanced and protected with exterior stain, pigmented for high UV resistance.

Care + maintenance quick guide

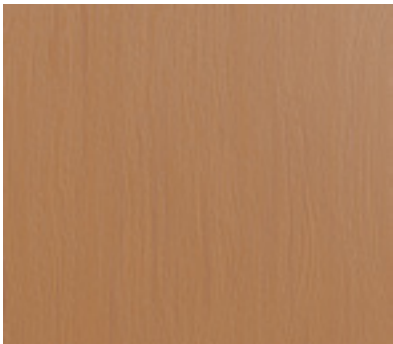

Cleaning - Remove any loose surface deposits with a soft bristled brush. Wipe down with fresh water and a non-abrasive cloth.

Tannins + Leaching - bottom+gardiner recommends placing furniture on a suitable surface after delivery and wetting down (or standing in the rain) prior to final installation, to allow the tannin to release.

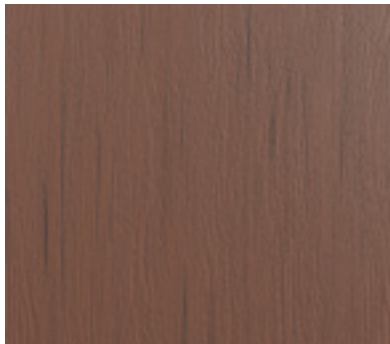

Natural Variations - Hardwood is unique from tree to tree. Part of the natural characteristics and individual beauty of hardwood include colour and grain variation, bore holes from insects and crevices and these do not affect its structural performance.

Duraslat™ XG

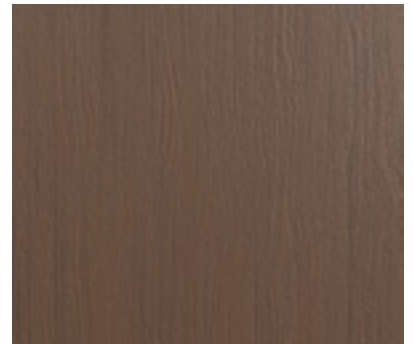

Duraslat™ XG is a sustainable alternative to hardwood. It is an ultra-low maintenance product with a full wrap-around skin for extra protection that provides added durability, mould, mildew, and stain resistance, as well as a splinter-free surface. There are 5 colours with a deep embossed grain that creates a natural wood-like texture and appearance.

Sandy Bay

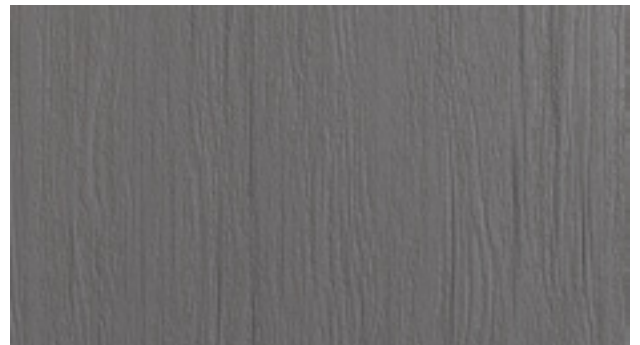

Boulder

Alcove

Ravine

Cave

Care + maintenance quick guide

Cleaning - Occasional cleaning with warm soapy water and high pressure water jet (max 1500psi) will enhance results. A fan tip nozzle should be used. Spray the soap and use a soft bristled brush to gently scrub the boards, and rinse soapy water off thoroughly to avoid leaving a film. Spray in the direction of the brush/grain pattern.

Maintenance - Never sand DuraSlat Grain, doing so will damage the protective qualities of the shell and void your warranty. Never use acetone or other solvents on DuraSlat Grain.

Steel Finishes

At botton+gardiner, our steel and stainless steel finishes are selected for their strength, durability and timeless aesthetic, ideally suited to high-use public environments. Whether elevating a design's visual presence or meeting the robust functional demands of outdoor and urban settings, our steel finishes offer enduring performance with understated elegance.

Materials & Grades

We use high-quality mild steel and 304-grade stainless steel across our bin range, ensuring excellent corrosion resistance and long-term durability in public applications. We offer marine-grade finishes and corrosion-resistant components like 316 stainless steel - ideal for coastal and waterfront environments. Speak to our team to find the right materials for your project.

Finish Options

Satin, polished - a soft sheen that strikes the perfect balance between matte and reflective. Its subtle texture reduces glare and visible fingerprints, making it ideal for high-traffic public areas where both aesthetics and practicality matter.

Powder-coat - Combines the strength and durability of stainless steel with a hard-wearing, coloured finish. With 29 contemporary powder-coat colours to choose from, this finish option offers exceptional design flexibility while adding visual impact and surface protection.

Care + maintenance quick guide

While steel is highly resistant to corrosion and wear, it is not completely maintenance-free. To preserve its appearance and performance over time, regular cleaning is essential. Environmental factors such as pollution, marine salt spray, or contact with acidic cleaning solutions can compromise the surface if not properly managed.

To ensure your steel maintains its original finish:

- Clean regularly using warm water with a mild detergent or soap
- Rinse with fresh water to remove residues, especially after contact with salty or acidic elements
- Dry and polish with a soft cloth, always wiping in the direction of the grain
- Avoid chlorine-based cleaners (including bleach), as they can cause irreversible pitting
- For stubborn stains or surface discolouration on stainless steel, use a mild abrasive cleaner or specialist stainless steel rust remover (not advised for powder-coated surfaces)
- For galvanised steel, start with a conservative cleaning approach and increase intensity only if necessary. For any scrubbing, use a hard plastic bristle brush — never steel bristles, as they can cause discolouration.

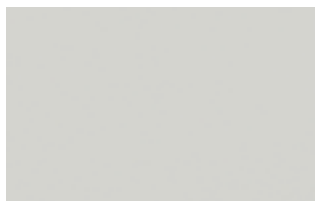

Regular upkeep will extend the life and appearance of your botton+gardiner steel products, ensuring they perform beautifully in even the most demanding public environments.

+ Powder-coats

Powder-coating gives a uniform, durable, high quality and attractive finish that is low in VOCs. Powder-coated surfaces have good flexibility and wear resistance giving them long term performance in high traffic areas. This cost-effective finish has great UV resistance and durability in the elements.
